Hold up the world

Bulletproof midsole safety footwear

Bulletproof midsole?

To ensure more complete safety from risk exposure, such as sharp nails, etc in the industrial working environment. It's a bulletproof midsole made of innovative fiber by improving the heavy and uncomfortable fit of the previous iron plate type's midsole. Experience the safety of comfortable fit in any environment.

Patent application

- Application Registration Number : 09-77974
- Domestic technology innovation that protects wearer's safety 100% with thin and light bulletproof new materials

Strengthen safety

- Design the actual foot shape, Strengthen foot protection with perfect stability that zeroes the possibility of penetration of hazardous materials.
- Designed to prevent penetration of any dangerous object with the same strength as bulletproof fabric. through differentiation of fabric production.

Efficiency of work improvement

- Improve work efficiency with more comfortable fit during work activities through new fabric made of natural materials and pasted together with high flexibility and resilience.
- Improves moisture / permeability because it is made of cloth that is 30% lighter than conventional steel plates.

Strengthen durability

- It can be used hygienically for a long time because of the low possibility of corrosion due to sweat or rainwater.
- Absorb shock by using a new cushioned material.

Y&K GROUP Greetings

Hello to all the workers who work hard every day at work sites nationwide?
This is the representative safety group Y&K in Korea.

Since our founding, we are a total of 3 corporations (PROSPECS, SHOES, TECHLINE)
for 20 years
We continue to produce, distribute, and sell safety products based on trust with our customers.
Starting in 2019, we set a goal to grow into a new and leap forward group. We will run.

On July 14, 2017, the warehouse fires caused a brief crisis.
We did it. However, thanks to the support and support from all store owners nationwide,
when As if so, it was able to recover to normal orbit in six months.
We want to return our gratitude for help from the store owners to our difficult friends.
We will always strive for good product + quality service + accurate work process.
Our ABC Group focuses more on the business of helping children suffering from hunger
according to the sales growth rate.

This holy thing is not what our company does, but the consumers who use our products
I will not forget to come true with your love.
Our safety products that you use to work safely are directly or indirectly
We humbly accept to invest through us to children who will be responsible for the future will do.

Even in the midst of a busy schedule, we will post a thank-you greeting to all those who have read
our catalog + this article. is. We will become ABC working harder in the future.

All Y&K employees

- **Size** : 230~300 (mm)
- **Upper** : Natural Cowhide + SYNTHETIC
- **Outsole** : PU + RUBBER
- **Adhesion** : INJECTION

JSTEP FEAT!

Exclusive supply contract with the world top sports brand "NIKE",

What is JSTEP

It is a specialized non-slip outsole brand that protects customers' lives and property by minimizing damage caused by slipping and free from slippery debris from slippery foreign substances such as water, water-soluble detergent, oil, etc. in walking daily life and working environment at industrial sites.

JSTEP's own outsole has been improved both wear resistance and non-slip ability, the main problem with shoes by adding special additives to the outsole to block slipping and dispersing weight into pieces,

Our JSTEP Outsole is being applied to the Pegasus Series, high-performance products among NIKE products and sold.

The three effects of JSTEP outsole

Weight dispersion

In slippery conditions, Block slipping by preventing weight concentration to one side and dispersing weight in multiple directions to maintain stable walking.

Prevention of hydroplaning

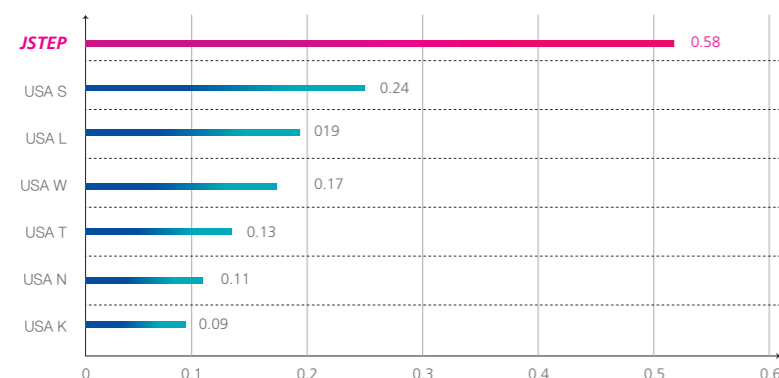

JSTEP prevents the occurrence of hydroplaning by carving and arranging the soles in a constant size, in order to prevent hydroplaning in slippery conditions where water or oil is mixed.

Reduce foot fatigue

The soles are carved and arranged in a constant size to significantly reduce the fatigue of the feet.
